

More multiply-add and conversion instructions

70B gate/up · GPU 0 · median of five matched launches · Relative change beside each Q2 bar

Prefill: 74.0% of the extra instructions

Decode: 63.5% of the extra instructions

FFMA: floating-point multiply-add. I2FP: integer-to-float conversion.

Separate phase scales; actual counts. Titles give the FFMA + I2FP share of the net instruction increase.
